Install Zipkin distributed tracing system on Ubuntu / Debian / CentOS

By [Jesphat Mutai](#) - April 6, 2019 4191 0

In this tutorial, we'll walk through installing and starting an instance of Zipkin tracing system on Ubuntu / Debian / CentOS Linux distributions. Zipkin is a distributed tracing system designed to help you gather timing data needed to troubleshoot latency problems in microservice architectures. It manages both the collection and lookup of this data. Its design is based on the [Google Dapper paper](#).

There are three options of running Zipkin tracing system:

- Using Java (jar file)
- Running in Docker Container
- Running from source.

In this guide, we will consider the first two options - Using Java and Docker. So let's get started.

Install Zipkin distributed tracing system using Docker

The easiest and quickest way of running Zipkin is via Docker.

Upgrade your LSTMs - 10x less training and data

Ad

How to install Docker CE on Ubuntu / Debian / Fedora / Arch / CentOS

Once Docker is installed, spin a Zipkin Docker container.

```
docker run -d -p 9411:9411 openzipkin/zipkin
```

Install Zipkin distributed tracing system using Java

This method will use distributed Java jar file to run Zipkin tracing system on Ubuntu / Debian and CentOS system.

Step 1: Install Java

Getting into Programming on a Mac: What You Need to Know
Modified date: April 7, 2022

```
sudo apt-get update
sudo apt-get install -y default-jdk jq vim
java -version
```

Install Java on CentOS 7:

```
sudo yum -y install epel-release
sudo yum install -y java-1.8.0-openjdk java-1.8.0-openjdk-
devel jq vim
sudo alternatives --config java
java -version
```

Step 2: Install Zipkin on Ubuntu / Debian / CentOS

Once you have Java 8 or higher installed, fetch the [latest release](#) of Zipkin as a self-contained executable jar:

```
curl -sSL https://zipkin.io/quickstart.sh | bash -s
```

To run Zipkin, just execute the command:

```
$ java -jar zipkin.jar
```

Sample output:

Step 3: Configure Systemd

Running Zipkin with the `java -jar` command will not persist system reboots. If your system has support for systemd, you can create service for it.

Move jar file to `/opt` directory:

```
sudo mkdir /opt/zipkin
sudo mv zipkin.jar /opt/zipkin
ls /opt/zipkin
```

1. Start by creating a system group for the user:

```
sudo groupadd -r zipkin
sudo useradd -r -s /bin/false -g zipkin zipkin
sudo chown -R zipkin:zipkin /opt/zipkin
```

2. Create Systemd Service

We can now create a systemd service file to manage our application.

```
# Zipkin System Service
[Unit]
Description=Manage Java service
Documentation=https://zipkin.io/

[Service]
WorkingDirectory=/opt/zipkin
ExecStart=/usr/bin/java -jar zipkin.jar
User=zipkin
Group=zipkin
Type=simple
Restart=on-failure
RestartSec=10

[Install]
WantedBy=multi-user.target
```

Memory limits can be set like this:

```
ExecStart=/bin/java -Xms128m -Xmx256m -jar zipkin.jar
```

Where `-Xms128m` and `-Xmx256m` are used to set the minimum and maximum memory that the application can use.

3. Inform systemd about the new service addition.

```
sudo systemctl daemon-reload
```

4. Once reloaded, start the service

```
sudo systemctl start zipkin.service
```

5. To check the status, use:

```
$ sudo systemctl status zipkin.service
● zipkin.service - Manage Java service
   Loaded: loaded (/etc/systemd/system/zipkin.service;
   disabled; vendor preset: disabled)
   Active: active (running) since Sat 2019-04-06 06:35:18
   UTC; 8s ago
     Docs: https://zipkin.io/
   Main PID: 6034 (java)
   CGroup: /system.slice/zipkin.service
           └─6034 /bin/java -jar zipkin.jar

.....
```

See screenshot below.

Step 4: Access Zipkin Web UI

Zipkin provides a nice interface for viewing traces based on service, time, and annotations. Browse to `http://your_host:9411` to access Zipkin Web UI and find traces.

Note: There is **no built-in authentication** in the UI. Zipkin UI can be secured by running it behind an authenticating proxy like Apache HTTPD, Nginx. Check running [Zipkin behind Apache](#) reverse proxy notes.

Step 5: Configure Tracers and Instrumentation

You have installed and Configured Zipkin, the last requirement is the configuration
